

KEVIN LEYOW

(+1876) 308-1844 | kleyow@gmail.com | github.com/kleyow | linkedin.com/in/kevin-leyow-71909b74/

PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with over 10 years of experience in the Software Development Life Cycle (SDLC), architecting and deploying scalable, cloud-native applications. Expert in Distributed Systems, Microservices Architecture, and Infrastructure as Code (IaC), with a proven track record in high-scale open-source contributions and real-time data processing.

CORE TECHNICAL SKILLS

AI & Machine Learning Integration: Agentic Workflows, LLM Orchestration, Prompt Engineering, AI-Augmented Development (Claude Code, GitHub Copilot)

Languages: TypeScript, Node.js, JavaScript, Python (Flask/Django), SQL

Infrastructure & DevOps: Kubernetes (K8s), Helm, Terraform, Docker, Jenkins, GitLab CI/CD, GitHub Actions, AWS, Azure, DigitalOcean

Data & Messaging: Apache Kafka (Event Streaming), MySQL, PostgreSQL, Redis, Elasticsearch, Logstash, Kibana (ELK Stack)

Architecture & Security: Microservices, Event-Driven Architecture, Event-Sourcing, RESTful API Design, OpenAPI 3.0 (OA3), Ory (OAuth 2.0/Kratos), mTLS, JWS, Identity Oracle Architecture

Frontend: React.js, Next.js, React Native, Micro-Frontend Strategy

PROFESSIONAL EXPERIENCE

Infitx (Mojaloop)

Sep 2020 – Present

Senior Software Engineer / Remote

- Architected foundational PISP and third-party microservices/SDKs (A) for the Mojaloop open-source ecosystem (P), establishing the core infrastructure for secure, interoperable third-party payment initiation (R).
- Leveraged Claude Code and GitHub Copilot (A) to accelerate the delivery of mission-critical payment infrastructure, utilizing prompt engineering to generate comprehensive unit tests and optimize performance-critical Node.js services (R).
- Led performance characterization and benchmarking (A) for core services using k6 and custom Express-based end-user simulators (P), successfully identifying latency bottlenecks and establishing baseline throughput for high-volume financial traffic (R).
- Engineered a specialized monitoring microservice (A) to track participant JWS and mTLS connectivity for real-time Grafana visualization (P), enhancing system observability and accelerating the resolution of cryptographic handshake issues (R).
- Optimized real-time clearing performance (A) by developing and refining position batching logic within the Central Ledger (P), which drastically reduced transaction latency and improved overall throughput for global financial transfers (R).
- Architected a self-healing reconciliation engine (A) to provide automated error recovery for complex event-driven transaction flows (P), resulting in a significant reduction in manual interventions (R).
- Streamlined API development velocity (A) by maintaining a snippets-based OA3 library for reusable type definitions and automated schema building (P), ensuring strict contract consistency across distributed microservices (R).
- Architected secure Identity Lookup Services (A) using Node.js, Kafka, and Kubernetes (P), ensuring high-throughput transaction processing and robust containerized deployment for distributed financial entities (R).

JGX Labs / Floccmedia

2015 – 2020

Freelance Software Developer / Remote

- Enhanced user discovery systems (A) by deploying the ELK Stack (Elasticsearch, Logstash, Kibana) (P), successfully reducing search latency and improving the auditability of high-volume transaction data (R).
- Maintained high-quality codebases (A) for mobile applications serving a diverse global audience (P), contributing to a consistent 4.5-star rating across more than 5 million active users (R).

- Architected Dual-Database Systems and Real-time Data Pipelines (A) using MySQL (P), facilitating backend analytics and low-latency in-app search functionalities via Elasticsearch (R).
- Engineered RESTful APIs (A) using Node.js (Express) on Serverless frameworks (P), optimizing performance for large-scale mobile and web applications (R).

Blaze Payment, Ltd

2013 – 2014

Co-founder & CTO

- Directed the technical strategy (A) for a mobile credit payment system tailored for regional markets (P), establishing an automated deployment environment using GitLab for continuous integration (R).

EDUCATION

University of the West Indies

BSc in Computer Science
